

Steps to Installing a Jenkins:

In ubuntu virtual machine we download the Jenkins

1.sudo apt update

2.sudo apt install openjdk-17-jre-headless

3.java -version

4.search this link on the website pkg.jenkins.io

5.select Debian-stable/.

6.Add security group if the Jenkins not access in the website : add custom TCP port Number 8080
(Security group ->inbound rule->add rule).

7.unlock Jenkins: `/var/lib/Jenkins/.....`copy this link and past into the terminal : `sudo cat` past that link.

8.Its generate one secrete key and past that into administrator password.

9.Install plugins.
